TCA 415: Adaption Planning and the Built Environment

Register today!

250-721-7589

bstadmin@uvic.ca

Explore skills and approaches used by those involved in urban and regional planning as they respond to the impacts of climate change on the built environment. This course focuses on climate science and diverse knowledge of products, equitable approaches to climate risk assessment, developing adaptation strategies that reduce risk and increase co-benefits, and evaluating the actors and institutions who are, or ought to be, involved in this work.

Delivery style: Online Asynchronous

Date: Sept. 9 to Dec. 7, 2026

Instructor: Dr. Craig Brown
